DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 16-22 and 24-30 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dennis et al (US5557704).

Dennis et al discloses a thick film heating device for use in a domestic appliance comprising a thick film heating element, a stainless steel heat transmission element, a triac as a power control device, a cooling device, a contacting device, a fluid chamber, and a moulded part with an inlet and outlet (column 3, line 56-column 4, line 55; column 6, line 25-column 7, line 64; Figures 1, 7, 8, 11). While Dennis et al does not disclose a power control is carried out by phase angle or pulse pause modulation, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have included a power control is carried out by phase angle or pulse pause modulation as a matter of design choice.

3. Claim 23 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dennis et al as applied to claim 16 above, and further in view of Lorenz et al (US4864106).

Dennis et al discloses all of the recited subject matter except a PTC thick film heater. Lorenz et al discloses a PTC thick film heater (column 6, lines 19-25). It would have been obvious to one of ordinary skill in the art at the time the invention was made to have included a

thick film heater with PTC characteristics as taught by Lorenz et al in the heating device of Dennis et al because, a thick film heater with PTC characteristics prevents the heater from overheating.
